

QUESTION 31 OF 52: NOT ANSWERED

On which of the following points would the authors of both passages most likely agree?

A

Computer-savvy children tend to demonstrate better hand-eye coordination than do their parents.

Hand-eye coordination is not discussed in Passage 2.

B

Those who criticize consumers of electronic media tend to overreact in their criticism.

Passage 1 does not suggest that critics of electronic media tend to overreact.

C

Improved visual-spatial skills do not generalize to improved skills in other areas.

In Passage 1, the author cites psychologist Patricia Greenfield's finding that "every medium develops some cognitive skills at the expense of others." In Passage 2, the author states "If you train people to do one thing (recognize shapes, solve math puzzles, find hidden words), they get better at doing that thing, but almost nothing else." Both authors would agree that an improvement in one cognitive area, such as visual-spatial skills, would not result in improved skills in other areas.

D

Internet users are unlikely to prefer reading onscreen text to reading actual books.

Neither passage discusses whether Internet users prefer reading printed texts or digital texts.
